Parameter "Automatik" bermaksud bahawa simbol carta aktif akan ditetapkan dalam bidang ini, "Terakhir digunakan" - simbol operasi perdagangan terkini. Sekiranya parameter "Default" dipilih, anda dapat menentukan instrumen kewangan tertentu yang akan ditetapkan secara automatik untuk semua posisi.
- **Jumlah** — pilihan ini menambah jumlah tertentu pada tettingkap pembukaan kedudukan, panel perdagangan pantas pada carta dan panel perdagangan di Market Watch. Parameter "Terakhir Digunakan" bermaksud bahawa jumlah operasi sebelumnya akan dipilih. Parameter "Default" memungkinkan untuk menentukan jumlah tertentu yang akan ditunjukkan secara automatik untuk semua posisi.

Pilihan "Gunakan Penyimpangan" membantu mengelakkan perkara ini. Apabila parameter "Default" ditetapkan, di sebelah kanan bahagian ini Anda dapat menetapkan penyimpangan harga maksimum yang dapat diterima dari nilai yang ditunjukkan dalam urutan. Sekiranya harga tidak sama, program akan mengubah order dan kedudukan baru akan dibuka. Sekiranya "Terakhir Digunakan" dipilih, nilai penyimpangan dari posisi dibuka sebelumnya akan ditetapkan secara automatik dalam tettingkap pembukaan pesanan.

## Menetapkan Limit Orders

Limit order diletakkan dalam jangkaan harga "rollback". Pedagang menjangkakan harga mencapai tahap tertentu, misalnya sokongan atau rintangan, dan kemudian bergerak ke arah yang bertentangan.

Order ini dilaksanakan dengan harga yang sama dengan yang ditentukan atau lebih baik daripada itu. Oleh itu, tidak ada keretakan semasa pelaksanaan order. Kelemahan order ini adalah bahawa pelaksanaannya tidak dijamin, kerana broker mungkin menolak order jika harganya terlalu jauh ke arah yang berlawanan.

Inilah cara kami membuat Buy Limit order.

Dalam contoh ini, harga berada pada tahap 1.25350, dan pedagang membuat limit order untuk membeli pada harga 1.24620 dengan jangkaan bahawa harganya akan mencapai tahap sokongan 1.24453 dan akan terus bergerak ke atas.

Ia adalah sebaliknya untuk Sell Limit order. Mereka diletakkan dalam jangkaan bahawa harga akan naik ke tahap tertentu dan akan turun.

## Menetapkan Stop Orders

Stop orders menyiratkan penembusan tahap yang diharapkan. Pedagang menjangkakan harganya akan mencapai tahap tertentu, menerobosnya dan bergerak ke arah yang sama. Pedagang menganggap bahwa pasaran telah berubah, setelah mencapai tahap sokongan atau rintangan.

Apabila pesanan seperti itu dipicu, permintaan untuk melaksanakan pesanan pasaran yang sesuai dikirimkan kepada broker. Pesanan dilaksanakan pada harga yang sama dengan yang ditentukan atau lebih buruk daripada itu. Dengan kata lain, jika harga pasaran berlawanan, pesanan akan diisi dengan slip. Namun, tidak seperti pesanan had, pelaksanaan perintah berhenti dijamin.

Dalam contoh ini, harga berada pada tahap 1.28190, dan pedagang membuat stop order untuk menjual pada harga 1.27600 dengan anggapan bahwa pasaran telah berbalik pada tahap 1.28260 dan akan bergerak ke bawah.

Ia adalah sebaliknya untuk Buy Stop order. Mereka ditempatkan dengan anggapan bahwa pasaran telah berubah, dan harganya akan naik.

**Risk Disclosure:** Trading foreign exchange on margin carries a high level of risk, and may not be suitable for all investors. The high degree of leverage can work against you as well as for you.
